

## Built for comfort

Insulco® Fat Batts can make your home more comfortable season after season - especially in the heat of summer or on freezing winter nights. They are made from new generation glasswool, the best performing, safest and most cost effective home insulation product in the world.

## New homes and renovations

Insulation is fundamental to making homes more energy efficient, by reducing heat gain and loss through walls, ceilings and floors. This helps reduce or even eliminate the need for heating and cooling which in turn reduces Greenhouse Gas emissions. The Building Code of Australia (BCA) has identified the need to make new homes and renovations more energy efficient, and minimum performance values have been set for various climate zones throughout Australia. *Insulco Fat Batts* comply with the insulation requirements in the BCA and can be used with confidence.

The most cost effective time to insulate is during construction or renovation as your insulation can be installed as you go. It provides the opportunity to install *Insulco Fat Batts* in your ceiling and walls for minimal cost, with maximum accessibility and ease.

*Built for comfort!™*

## It's never too late to insulate

It's never too late for existing homes to take control of their comfort. As long as there is adequate access in the roof space you can insulate your ceiling with *Insulco Fat Batts*. It is also possible to top up old insulation to maximise performance.

Insulating walls in timber framed construction is a little more difficult as you need to remove the plasterboard to get to the cavity behind it - if you are planning on renovating, leave the wall insulation till then. However, if your walls are not insulated, you may want to consider using a higher R-value in the ceiling to help compensate.

## Installation

Installing *Insulco Fat Batts* in your home is an easy DIY job - simply visit your local stockist and follow the instructions on the pack. Alternatively, your local Insulco Approved Distributor can do the whole job for you.

## Safe as houses

**NO HEALTH RISK** - Fat Batts are proven to be no health risk and are safe to use in your home. In fact there are many positive health benefits in insulating the home.

**SAFE BIO-SOLUBLE FORMULATION** - Fat Batts are made from a new generation Bio-Soluble formula that will dissolve if inhaled.

**FIBRES BONDED FOR LOW DUST** - Fat Batts fibres are bonded to stop them entering the home.

**ALLERGY & ASTHMA SAFE** - Fat Batts have been tested and shown to have a low VOC content which makes them suitable for asthma and allergy sufferers.

**NON-COMBUSTIBLE FIRE SAFETY** - Fat Batts glasswool batts are non combustible<sup>#</sup> and can be used with downlights with confidence when installed as per AS3999\*.

**ECO-FRIENDLY** - Made from approximately 70% recycled material. A responsible and sustainable product for our future.

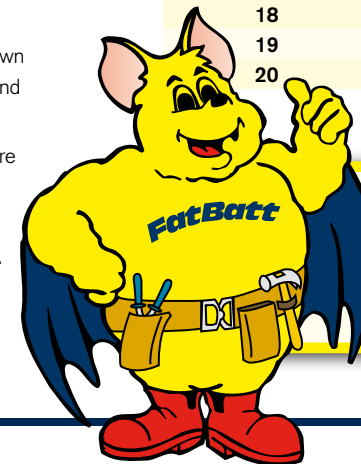

<sup>#</sup>AS 1530.1 Test for Combustibility of Materials. \*Not to be installed directly above downlights in accordance with AS3999. At least a 25mm gap between each light and insulation is required.

## How many packs do I need?

The table below provides a guide as to how many packs of Easy-Fit 430mm wide batts\* will be required to insulate your ceiling based on its area. Note: Easy-Fit 430mm batts can be used where ceiling joists are spaced at 450mm or 600mm centres. For 600mm centres, Easy-Fit batts need to be split down the perforation in the centre. Alternatively, Insulco Fat Batts come in 580mm wide batts specifically for 600mm timber centres. For more information contact your Insulco distributor.

HOUSE SIZE squares	HOUSE SIZE m <sup>2</sup>	NUMBER OF PACKS
5	47	5
6	56	6
7	65	7
8	74	8
9	84	9
10	93	10
11	102	11
12	111	12
13	121	13
14	130	14
15	139	15
16	149	17
17	158	18
18	167	19
19	177	20
20	186	21

\*applies to R2.5 through R3.5 430mm range.

### FatBatt Tip

*'Don't forget to install Insulco FatBatt Acousti-therm in your internal walls for a quieter more peaceful home'*

For a list of your local stockists or Insulco Approved Distributors go to [www.fatbatts.com.au](http://www.fatbatts.com.au) and type your postcode into the Fat Batt Estimator.

# PERFORMANCE YOU CAN TRUST

Fletcher Insulation have met the requirements of the leading authorities on building insulation performance, safety and environmental credentials.

CodeMark certification for a product provides guaranteed acceptance by the regulatory bodies within the detailed criteria set out in the certificate. Insulco FatBatts insulation has been evaluated and certified to ensure it meets the specified requirements of the BCA for energy efficiency.

CodeMark ensures confidence for designers, architects, builders, building control authorities, consumers and others who specify, or use these products.

Fletcher Insulation is Australia's first insulation company to be GECA certified for its Insulation & Building Blankets range of products. This independent accreditation system recognises the development and manufacturing of products that have proven environmental performance and is recognised worldwide through its affiliations.

FI - 2007  
GECA 33 2007 - Building Insulation  
www.geca.org.au

The Australian/New Zealand standard AS/NZS 4859.1 is product certification of Materials for the thermal insulation of buildings as required by the BCA. The Energy Efficiency provisions of the BCA requires that all insulation complies with AS/NZS 4859.1 which specifies testing and labelling requirements for all types of insulation incorporated into the building envelope and it's services.
